                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This SWISS-PROT entry is copyright. It is produced through a collaboration between the Swiss institute of Bioinformatics and the EMBL outstation the European Bioinformatics Institute. There are no restrictions on it use by non-profit institutions as long as its content is in no we
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       EMBL;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      -!- TISSUE SPECIFICITY: Nervous system specific. A higher level expression is seen in the brain as compared to the spinal cord.
-!- SIMILARITY: Belongs to the synaptobrevin family.
-!- SIMILARITY: Contains 1 v-SNARE coiled-coil homology domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     vesicles to their target membrane.
-!- SUBUNIT: Interacts with VAPA and VAPB (By similarity). Part of the SUARE core complex containing SNAP25, VAMP2 and STX1A. This complex binds to CPLX1.

The invention comprises clostridial neurotoxin substrate peptides which can serve as fluorescence resonant energy transfer assay (FRET) or quenched-signal substrates in assays for the proteolytic activities of clostridial neurotoxins. The invention further comprises Clostridium botulinum neurotoxin substrate peptides that can serve as immobilised substrates (i.e. bound to a solid phase) in assays for the proteolytic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               02-SEP-2002

                                                                                                                                                                                                                                                                                                                                                                     Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 activities of clostridial neurotoxins. The clostridial (including Clostridium botulinum) neurotoxin substrate peptides are useful for detecting the presence of clostridial neurotoxins in a sample (e.g. or an environmental sample). The present amino acid sequence repreclostridial neurotoxin substrate peptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence was investigated in the search for Botulinum inhibitors (BttxB). Previn compounds which inhibit the enzymatic a of BttxB and tetanus neurotoxins were isolated. Previns may be use construct compounds such as buforinins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gordon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             VAMP2; antibacterial; Botulinum toxin inhibitor; BttxB; previn;

The buforins are useful for treating Botulinum or tetanus intoxication by administering a composition comprising a buforin to the subject prior to the contact with BttxB or tetanus intoxication. Antibodies specific for buforins are useful for detecting buforins by forming immunocomplexes. The buforins have improved circulatory half-life, solubility, resistance to degradation and interaction with the active site of the toxin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC invention. Human secreted proteins have activities based on the tissues CC and cells the genes are expressed in Example of activities include: CC cytostatic; immunosuppressive; noutropic; neuroprotective; antiviral; CC antiallergic; hepatotropic; antidiabetic; antiinflammatory; antivicer; CC vulnerary; anticonvulsant; antibacterial; antiinflammatory; antiulcer; CC vulnerary; anticonvulsant; antibacterial; antifungal; antiparasitic; and CC cardiant. The polynucleotides and polypeptides are useful for preventing, CC treating or ameliorating a medical condition in e.g. humans, mice, CC rabbits, goats, horses, cats, dogs, chickens or sheep. The polypeptides CC can also be used as a food additive or preservative to increase or CC decrease storage capabilities. The polynucleotide are useful for CC chromosome identification. They are also useful as probes for diagnosing CC candor ovary cancer. They are also useful in the gene therapy of breast CC and ovarian cancer. Secreted protein nucleic acids, proteins, antibodies, CC agonists and antagonists are useful in the diagnosis, treatment and CC agonists and antagonists are useful in the diagnosis, treatment and CC prevention of: (a) cancer; (b) immune disorders; (c) cardiovascular of infectious diseases such as viral, bacterial, fungal and parasitic confections. AAC74328 to AAC74336 and AAB39401 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

Combined is differentially regulated an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal combined by the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal combined by the expression of a polynucleotide sequence which is differentially the expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a compound that regulates the activity of one or more of the compound that regulates the activity of an animal of one or more activity in an animal of one or more of the polynucleotides given in the composition, a method for identifying a compound useful in treating the one or more composition, an enthod for identifying a compound useful in treating compain and a pharmaceutical composition comprising the one or more condulates its activity is useful for preparing a medicament for treating compain (e.g. spinal segmental nerve injury (Chung), chronic constriction conjury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene the specification, which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed constriction is patent did not form part of the printed constriction is patent did not form part of the printed constriction is patent did not form part of the printed constriction is the printed in the printed constriction in the printed constriction is patent did not form part of the printed constriction in the pr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention discloses a composition comprising two or more isolated in or human polynucleotides or a polynucleotide which represents a fragment derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a victor is differentially regulated in an animal subjected to pain and a victor is differentially regulated in an animal subjected to pain and a victor is differentially regulated in an animal subjected to pain and a victor is differentially regulated in an animal subjected to pain and a victor is differentially regulated in an animal subjected to pain and a victor is described.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     14-AUG-2001; 2001US-0312147P.

The invention discloses a composition comprising two or more isolated rat cor human polynuclectides or a polynuclectide which represents a fragment, contributed are a vector comprising the movel polynuclectide, a host cell comprising the vector, a method for identifying a nuclectide sequence. Also comprising the vector, a method for identifying a nuclectide sequence comprising the vector, a method for identifying a nuclectide sequence comprising the vector, a method for identifying an agent composition of the polynuclectide sequence which is differentially expressed in neuronal tissue of a first animal composition of a polynuclectide sequence which is differentially expressed in neuronal tissue of a first animal compound that regulates the activity of one or more of the polynuclectides sequence which is differentially compound that regulates the activity of one or more of the polynuclectides, a method for producing a pharmaceutical composition, a compound that regulates the activity of one or more of the polynuclectides, a method for producing a pharmaceutical composition, a polynuclectide or identifying a compound useful in treating compainting a method for identifying a compound useful in treating compainting a method for identifying a compound useful in treating compainting a compound that compainting a compound useful in treating compainting a compound useful in treating compainting a compound useful in treating compainting compainting a compound useful compainting and compound that compainting and compound that compainting and compainting a compound compainting and compound compainting a medica
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               14-AUG-2001;

                                                                                                                                                                                                                    CC which is differentially regulated in an animal subjected to pain and a CC kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polymucleotide sequence CC that is differentially expressed in neuronal tissue of a first animal CC subjected to pain, a method for identifying a compound which regulates the expressed in an animal subjected to pain, a method for identifying a compound which regulates the cC compound that regulates the activity of one or more of the polymucleotides, a method for producing a pharmaceutical composition, a cc method for identifying a compound or small molecule that regulates the cc activity in an animal of one or more of the polymeptides given in the specification, a method for identifying a compound useful in treating CC pain and a pharmaceutical composition comprising the one or more polymeptides or their antibodies. The polymeptides or the compound that CC modulates its activity is useful for preparing a medicament for treating CC pain (e.g. spinal segmental nerve injury (Chung), chronic constriction CC injury (CCI) and spared nerve injury (Chung), chronic constriction CC therapy). The sequence presented is a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: CC medicates and the for this patent did not form part of the printed of the sequence data for this patent did not form part of the printed.

                                                                                     The invention discloses a composition comprising two or more isolated rat cor human polynucleotides or a polynucleotide which represents a fragment, cc derivative or allelic variation of the nucleic acid sequence. Also cc claimed are a vector comprising the novel polynucleotide, a host cell cc which is differentially regulated in an animal subjected to pain and a cc kit to perior the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal cc that is differentially expressed in neuronal tissue of a first animal cc expressed in an animal subjected to pain, a method for identifying a compound which regulates the expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a cc polynucleotides, a method for more of the polypeptides given in the cativity in an animal of one or more of the polypeptides given in the cativity in an animal of one or more of the polypeptides given in the cativity in an animal of or identifying a compound useful in treating compound (e.g. spanal segmental nerve injury (Cumg), chronic constriction composition comprising the one or more of polypeptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain. Note: the specification, which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed composition, but was obtained in electronic form directly from WIPO at the specification, but was obtained in electronic form directly from WIPO at the specification will shed not sequences.
                                                                 specification, but was obt;

RESULT 10
ADE57600
CC, which is differentially regulated in an animal subjected to pain and a computation of decreases the expression of the polymucleotide sequence that increases or decreases the expression of the polymucleotide sequence that is differentially expressed in neuronal tissue of a first animal compounds the polymucleotide sequence which is differentially expressed in neuronal tissue of a first animal compound which regulates the expressed in an animal subjected to pain, a method for identifying a compound which regulates the compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the compound for identifying a compound or small molecule that regulates the compound that regulates the compound or small molecule that regulates the compositivity in an animal of one or more of the polypeptides given in the composition, a method for identifying a compound useful in treating compain and a pharmaceutical composition comprising the one or more complicated that composition comprising the one or more complicates or their antibodies. The polypeptides or the compound that composition composition constriction conjury (CCI) and spared nerve injury (Chung), chronic constriction conjury (CCI) and spared nerve injury (Chung), chronic constriction conficient in the sequence presented is a rat protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: composition but was obtained in electronic form directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  14-AUG-2001; 2001US-0312147P

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Rat; pain; neuronal tissue; gene therapy; spinal segmental nerve injury; chronic constriction injury; CCI; spared nerve injury; SNI; Chung.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     29-JAN-2004
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention discloses a composition comprising two or more isolated or human polynucleotides or a polynucleotide which represents a fragmed derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence this is a sequence of the vector.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New composition comprising two or more isolated polypeptides, useful preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Woolf C,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     14-AUG-2002; 2002WO-US025765

The invention discloses a composition comprising two or more isolated rat cor human polynucleotides or a polynucleotide which represents a fragment, cc derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal composition of a polynucleotide sequence which is differentially expressed in neuronal tissue of a first animal compound that regulates the activity of one or more of the compound that regulates the activity of a pain an enthod for identifying a compound that regulates the activity of a paramaceutical composition, a compound that regulates the activity of a pharmaceutical composition that polynucleotides a method for identifying a compound useful in treating composition, a method for identifying a compound useful in treating composition, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more composition is activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction contriction injury (Chung). The sequence presented is a rat protein (shown in Table 2 of the specification, but was obtained in electronic form directly from WIPO at specification, but was obtained in electronic form directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ADE57604
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RESULT 11
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          S
The invention discloses a composition comprising two or more isolated rat CC or human polynucleotides or a polynucleotide which represents a fragment, CC derivative or allelic variation of the nucleic acid sequence. Also CC claimed are a vector comprising the novel polynucleotide, a host cell CC comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a CC kit to perform the method, an array, a method for identifying an agent that is differentially expressed in neuronal tissue of a first animal CC subjected to pain, a method for identifying an agent CC the expression of a polynucleotide sequence which is differentially expressed in expensive which is differentially expressed in an animal subjected to pain, a method for identifying a compound which regulates the expression, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more CC polynucleotides or their antibodies. The polynucleotide or the compound that composition in the activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction conjury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SXS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Best Loc

derivative of allelic variation of the nucleic acid sequence. Also calaimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound of for identifying a compound of polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating

The invention discloses a composition comprising two or human polynucleotides or a polynucleotide which re

represents a or more isolated

fragment,

rat

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   therapy). The sequence presented is a rat protein (shown in Table the specification) which is differentially expressed during pain. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from the ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       14-AUG-2001; 2001US-0312147P

                            The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates to pain, a method for identifying a compound which regulates are expression of a polynucleotide sequence which is differentially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    14-AUG-2001; 2001US-0312147P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polypucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene therapy). The sequence presented is a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at
                  expressed in an animal subjected to pain,
                                                                                                                                                                                                                                                              Claim 1;
                                                                                                                                                                                                                                                                                            New composition comprising two or more isolated polypeptides, useful preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                            Woolf C,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              14-AUG-2002;

The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polynuclectide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene therapy). The sequence presented is a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at
                                                                                                                                                                                                        New composition comprising preparing a medicament for

CC that is differentially expressed in neuronal tissue of a first animal CC subjected to pain, a method for identifying a compound which regulates CC the expression of a polynucleotide sequence which is differentially CC expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the CC compound that regulates the activity of one or more of the CC polynucleotides, a method for producing a pharmaceutical composition, a cC polynucleotide of the compound or small molecule that regulates the CC contivity in an animal of one or more of the polynucleotide given in the CC pain (e.g. spinal segmental composition comprising the one or more CC pain (e.g. spinal segmental nerve injury (Cnng), chronic compound that cC modulates its activity is useful for preparing a medicament for treating CC pain (e.g. spinal segmental nerve injury (SNI)) in an animal (e.g. gene CC the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed composition, but was obtained in electronic form directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DB
